PERSONAL PROJECTS

Library Management system (Web-MERN Stack) [🔗](#)

- A **MERN** stack project with **Redux** that offers an interface to handle books, enables students to issue books and keep track of them, as well as a book return penalty feature. It uses user-based authentication for various roles and **bcrypt** password encryption. [Project Link](#)

Covid Tracker (Web Application) [🔗](#)

- An **react-based** project that offers a dashboard to follow COVID-19 records using apis and presents the results of deaths and recovery on a map with the corresponding nations. On the **firebase** service, the website is hosted. [Project Link](#)

Uber Clone (Mobile App)

- App made using **react native** and **google cloud service** like auto location and distance matrix api , which allow users to choose their location/destination and can view the directions on map. [Github Link](#)

Movie Recommendation(Mobile & Web Application)

- This project recommends different movies based on different genres.
- web app made using react,apis and hosted in firebase ([link](#))
- App made using react native and apis. (view the app: [link](#))
